**Draft - Site inspection work plan Naval computer and telecommunications area master station Barrigada UST 19 and Camp Covington USTs 16, 19, 20**  
United States. Naval Facilities Engineering Command.

**Title:** [Draft - Site inspection work plan Naval computer and telecommunications area master station Barrigada UST 19 and Camp Covington USTs 16, 19, 20.](#)

**Physical description:** 1

**General Note:** Prepared by: AECOM Technical Services Inc., Prepared under: N62742-12-D-1829, CTO 0056.

**Summary:** This work plan documents the proposed sampling and analysis program for the site inspection of the Naval Computer and Telecommunications area master station (NCTAMS) Barrigada underground storage tank (UST) 19 and Camp Covington USTs 16, 19, 20, U.S. Naval Base Guam. The principal objective of the sampling and analysis program is to characterize the nature and extent of contamination attributable to previous maintenance activities at the Barrigada and Camp Covington locations, which include waste oil UST operations. While the two sites are not co-located, the four USTs within them share similar characteristics and history and will require a similar SI effort. As a result, they are covered together in this work plan.
